Design Turkey Award-Winning Acoustic Lighting Design

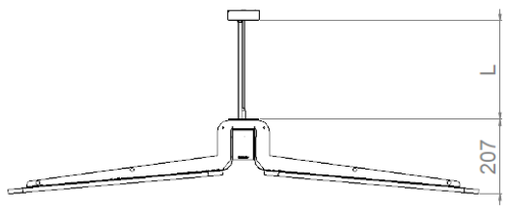

REST-SQ, winner of the Design Turkey Outstanding Design Award, combines acoustic comfort and architectural lighting in a single product with its original design. Developed on a standard linear profile infrastructure, the product offers homogeneous and comfortable lighting while reducing echo in the environment with square and rectangular acoustic felt panels, thus improving the acoustic performance of workspaces.

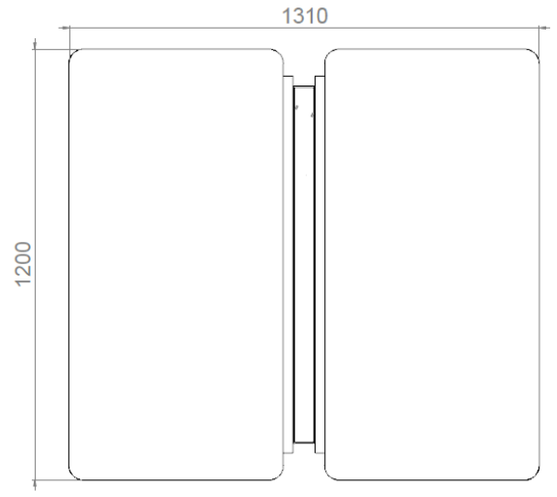

Its unique square form creates an architectural effect on ceilings, while it can be customized to match the interior concept and corporate identity with different felt color options. It is an award-winning lighting solution that combines aesthetic, technical and acoustic performance for offices, meeting rooms, training areas and social spaces.
