Protected LED Bar for Harsh Environments

Space IP65, as the high-protection version of the Sinus LED Bar series, is developed for applications requiring resistance to dust and moisture. Its aluminum housing and IP65-protected socket cable connection offer a reliable lighting solution. The LED modules are coated with a special protective resin. This prevents water, moisture, and dust from reaching the LED components, increasing the product's durability and lifespan.

It is an ideal solution, especially for outdoor architectural lighting, facade details, eaves, niche applications, landscape elements, under shelves, corridors, and decorative concealed lighting projects.
