PERA

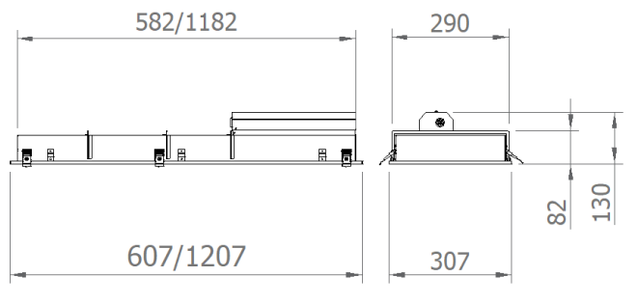

02182

Pera is an architectural lighting solution that combines direct and indirect lighting in a single unit. While providing effective general lighting with its central diffuser structure, it creates a more balanced, comfortable, and spacious lighting effect thanks to the indirect light reflected from the side surfaces onto the ceiling.

Available in 30x60 cm and 30x120 cm sizes to adapt to different spatial needs, Pera offers a modern lighting approach, especially in offices, educational buildings, corporate spaces, and commercial projects. The combined use of direct and indirect light contributes to balancing illumination levels on both horizontal and vertical surfaces.
