Homogeneous Lighting on Continuous Lines

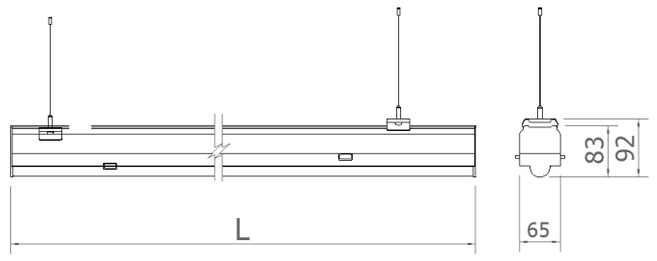

The Runnel Lighting Unit is an opal diffuser lighting module developed for continuous lighting (trunking) systems. Working with trunking infrastructure where energy is transmitted along the line from a single supply point, it offers the advantages of quick installation, low cabling costs, and easy maintenance. Thanks to its modular structure, the lighting units can be easily placed or replaced where needed.

With its 120° symmetrical light distribution and high light transmittance opal polycarbonate diffuser, it provides homogeneous and comfortable general lighting. It offers a reliable and long-lasting solution by adapting to continuous lighting infrastructure in warehouses, logistics centers, production facilities, supermarkets, and large commercial areas.
