Acoustic Comfort, Layered Lighting

Skate-RM is a hybrid solution that combines reflector-equipped linear lighting with sound-absorbing acoustic felt panels for visual comfort, and two integrated spotlights. It provides both main and accent lighting, creating a layered and aesthetically pleasing light scheme in the space.

Thanks to glare-controlled reflectors and precision lens optics, it offers visual comfort with a UGR≤16, while the acoustic felt panel reduces echo, improving sound quality in working environments. It adapts to architecture with different felt colors and customizable panel sizes. It combines acoustic treatment, general lighting, and accent lighting in a single product for offices, meeting rooms, training areas, and social living spaces.
